Categories used here:

- **Extinct in the wild**: Known only to survive in captivity or in an introduced population well outside the natural range.

- **Critical risk**: Facing an extremely high risk of extinction in the wild.

- **Endangered**: Facing a very high risk of extinction in the wild.

- **Vulnerable**: Facing a high risk of extinction in the wild.

- **Lower risk**: Does not qualify for one of the other categories now, but is close to qualifying or is likely to qualify for one of them in the near future.

- **Stable in the wild**: Does not qualify for any of the other categories, and is currently widespread or abundant.

- **Status Unknown**: Not evaluated, or not enough data exists to make an accurate determination of status.
